What will the hospital bedroom look like in the future? How can we improve the comfort of the patient and positively influence his recovery while enhancing the efficiency of care and facilitating the work of the medical teams?

Many technologies and applications are related to this evolution. The matchmaking event “hospital bedroom of the future” is the perfect opportunity for all the actors working on these topics to share their experiences and meet new collaboration partners.

Come and join us on May 19th in Liège in this event organised by the University of Liège and Sirris, as partners of the TTC project, in association with Agoria.
